

INSTRUCTOR SELF-ASSESSMENT

User's Guide

The self-assessment forms were developed to help you (the instructor) evaluate: (a) your knowledge about *key* safety and health information covered by each TECHS module, and (b) your skills related to some, but not all, lab activities.

Prior to teaching a module:

1. **Complete** the assessment (closed book test). Take as much time as you need.
2. **Check** your answers using the key provided.
3. **Review** the slide(s) referenced in the key for each question with incomplete or incorrect answers. *Aim to master the information before presenting it in class.*
4. **Practice** the activities for which you answered “disagree” or “strongly disagree” in the Skills section of the assessment. *Aim to master an activity before demonstrating it in class.*

We recommend that you review all components of a module before teaching it, including the documents available in the “I want to know more” folder.
