

KNOWLEDGE

The most important health problem caused by isocyanates is:

- Kidney damage
- Liver damage
- Asthma
- Hearing Loss

If you have isocyanate-induced asthma, then:

- You will usually get better in one year and return to work
- You will only be able to work as a body man
- You will never be able to work in a collision shop again
- You will work as a painter, but ask someone else to mix the paints you spray

A single, intense exposure to isocyanates, that occurs when cleaning up a large spill without using protective equipment, can induce life-long sensitization to these chemicals.

- True
- False

I can tell there is too much isocyanate in the air because I can smell it.

- True
- False

Isocyanates have:

- A distinct fruity odor
- A sweet smell
- No distinct odor
- A highly irritating smell

You can come into contact with isocyanates doing which of the following operations? (check all that apply)

- Mixing coats
- Spraying clears
- Washing a recently painted car
- Removing masking tape
- Sanding recently-applied clear coat

The Safety Data Sheet (SDS) contains information about all of the following except:

- Health effects
- Permissible exposure limits
- pH
- How to use the product
- What to do in case of an emergency

Safety data sheets (SDS) must meet each of the following criteria except:

- Be up-to-date
- Be accessible to all employees
- Be available for all chemical products in the shop
- Be condensed so they are easy to read

Which of the following will protect your from isocyanates?

- Medical-grade latex gloves
- Mechanic's gloves
- Leather gloves
- Nitrile 8 mil gloves

SKILLS

I am comfortable with my ability to demonstrate and explain how to select appropriate gloves for protection from isocyanates.

- Strongly Agree
- Agree
- Disagree
- Strongly disagree

I am comfortable with my ability to demonstrate and explain how to verify that the ventilation in the paint mixing room is working effectively.
